

STATEMENT
NET ZERO EMISSIONS BY 2050

January 2025

As a leading global supplier of electronic components, YAGEO Group is committed to the sustainable protection of people and the environment, recognizing our role in addressing climate change and preserving vital ecosystems.

We are implementing a comprehensive strategy to reduce our carbon footprint and achieve net zero Scopes 1 and 2 greenhouse gas (GHG) emissions by 2050. By consolidating emissions data from our global manufacturing operations into a unified platform, we can establish incremental emissions reduction targets within a dynamic roadmap framework. This framework allows for adjustments to our targets to remain effective and responsive to evolving business circumstances. Our emissions reduction strategy will be implemented through a phased approach. Each phase, summarized below, will contribute directly to the achievement of our goals.

Phase	Roadmap to Net Zero Scopes 1 and 2 GHG Emissions
2025 – 2030	Energy Efficiency Optimization
2030 – 2035	Equipment Modernization
2035 – 2045	Renewable Energy Integration
2045 – 2050	Electrification of Operations
2050	Targeted Carbon Reduction Investments
